12/11/16 02:00 EST	0	Heavy Snow
12/12/16 01:00 EST	0	

A long-duration snowfall occurred on December 11. A low pressure system over the Central Plains moved northeast over Lower Michigan, bringing good moisture to the region. With cold air in place, the precipitation fell as all snow through the entire event. Snow began as a dry and fluffy type with temperatures in the lower 20s during the morning hours. Temperatures then slowly rose into the lower 30s during the afternoon and evening hours, causing the snow to become wetter. Total snowfall accumulations ranged from 7-11 inches across most of Southeast Michigan, with the exception being over Huron County where accumulations came up short of 6 inches.

Here are some of the higher totals received:

White Lake... 11.3 inches  
Ann Arbor... 11.2 inches  
Corunna... 11.1 inches  
Sterling Heights... 11.0 inches  
Detroit Metro Airport... 10.7 inches  
Dundee... 10.0 inches  
Fort Gratiot... 9.6 inches  
Brighton... 9.5 inches  
Lapeer... 9.5 inches  
Grand Blanc... 9.5 inches  
Onsted... 9.0 inches  
Oil City... 8.6 inches.
